- Utilizzo di BeautifulSoup invece di Selenium, vista l'impossibilità di avviare un browser in AWS
   Glue
- Problema: impossibilità da parte di BeautifulSoup di accedere a codice HTML generato da ReactJS
  - → impossibilità di accedere ai dati riguardanti i "next watch"

#### PROBLEM SOLVED

Utilizziamo tecniche di ML per consigliare il prossimo video

- Problema: difficoltà nella creazione di file all'interno di un bucket S3 da job AWS Glue
- Appesantimento del sistema (scrittura su file csv e successiva lettura del file per aggiornamento DB)

#### **PROBLEM SOLVED**

Caricamento diretto dei risultati su Atlas MongoDB

 Trigger mensile per l'aggiornamento del DB.
 La frequenza mensile è stata una scelta cost-driven, ma in produzione potremmo impostare una frequenza maggiore Trigger properties
